OUTDOOR LG LED SIGNAGE

LBB Stadium Series

Qualified for
UEFA Criteria

Quick and Simple
Maintenance

Electrical Safety

Design for Injury
Prevention

Power & Signal
Redundancy

IP Rated
Weatherproof Design

Qualified for UEFA Criteria

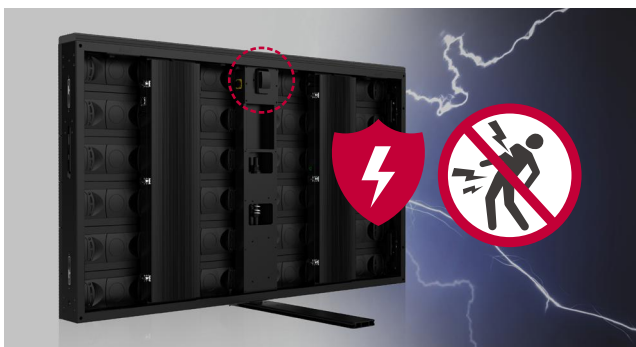

The LBB series meets the LED technical specifications of UEFA (Union of European Football Associations) that a perimeter LED signage should follow when installed in UEFA's stadiums.

* Full approval from UEFA can only be given once a system is checked on site.

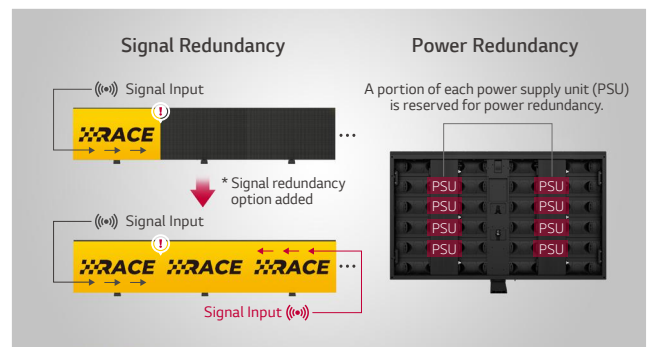

Quick and Simple Maintenance

The LED module can be replaced only in one minute from both front and rear sides, minimizing maintenance time and spatial constraints. Also, every electric component is easily serviced.

Electrical Safety

A circuit breaker is included in each cabinet not only to protect people from electric shock by current leakage causes, but also to provide security from an overcurrent.

Redundancy Support

The LBB series supports both power and signal redundancy to reassure the operator and ensure the continuous operation even if there is power failure or no signal.

Design for Injury Prevention

In consideration of the safety of players and staffs, the front and top parts of a cabinet are designed with a rubber pad and a rubber louver to prevent serious injury caused by hitting it during a game.

Foldable Design

In case of an emergency, people in the stadium can escape quickly and easily by folding down the cabinets.
